

Who We Are

Claritas Rx is a digital health venture focused on biopharmaceutical distribution channels. Our proprietary information system helps innovative drug manufacturers aggregate internal and external data sources and harvest the commercial insights available from specialty distribution channels.

We integrate data from specialty pharmacies, patient access hubs, free drug programs, copay support vendors, field sales teams and other sources to resolve barriers to access and identify promotional opportunities that are often overlooked.

Our novel technology platform is deployed to monitor specialty pharmacy performance, evaluate the return on promotional initiatives, forecast sales and more, and is consulted by the C-suite leadership of our customers on a daily basis.

The Position**Database Developer**

As Database Developer, you will design and implement systems and algorithms for ingesting, analyzing, and serving complex healthcare data. You will build products that transform disparate data into actionable, meaningful insights for our customers and business. You will be a critical member of a product and engineering team that is building a unique healthcare information technology platform.

Responsibilities

- Collaborate with developers and product managers regarding database requirements, data stability and other matters related to the databases
- Translate the business requirements of the product team into queries, stored procedures, schemas, and other database products
- Develop, implement, administer, and maintain policies and procedures for ensuring the security and integrity of databases
- Design and develop the database infrastructure, along with database maintenance, backup & recovery and administration duties to ensure that all database systems are operating efficiently and optimally
- Implement data models, database design and data access
- Optimize database performance and manage capacity constraints. Ensure database design is scalable as individual customers' databases grow and as new customers are added
- Protect operations by keeping information confidential and by following HIPAA, HITECH and other standards for information security in health care environments. Ensure all access is adequately logged and monitored
- Perform DB support activities in partnership with internal and external service providers
- Manage source code control, deployment practices and change control procedures

CONFIDENTIAL

Who You Are

Required Skills:

- Expertise in Database Programming with MySQL including all the elements of the Responsibilities section
- Strong knowledge of SQL, and stored procedures & functions including complex joins, query performance, triggers and views
- Expert in creating and maintaining sandbox, dev and production DB
- Strong documentation and sharing skills
- Desire to work with non-technical users from idea through specification and development to final implementation
- Deep understanding of relational database design, including optimization strategies

Preferred Skills:

- Demonstrated success working in an Agile Scrum environment
- Linux experience
- Experience with statistical packages
- Experience with ETL tools such as Talend and Informatica
- Systems administration experience, especially with AWS
